

Innovative Parking Solutions

Clear away all travel-related obstacles and enable your customers to experience city life the way it's meant to be lived.

Your customers will find a welcome start in the city, beginning with convenient parking. SKIDATA has developed innovative systems for cities and municipalities that provide for smooth interaction between flowing and stationary traffic.

SKIDATA – Experience the Life of the City

Quickly find the right parking space, conveniently switch to public transportation, pay only once – make it easy for your customers. Combine all your parking facilities in a network and connect with the municipal traffic management system. This means: centralized control and monitoring of all systems. Traffic flows unimpeded and protects the environment.

Surprise your visitors with service-oriented offers such as Park&Ride, common payment models for parking and city tolls, or with the benefits of connecting city cards. With SKIDATA your guests are one step ahead when it comes to a hassle-free city experience.

Your Benefits

Intuitive networking capabilities

numerous parking facilities in one city

Maximum utilization

based on connection to municipal traffic management systems

High efficiency

through centralized control of networked parking garages, intelligent remote monitoring and proactive service management with SKIDATA Operator.Services

Business intelligence

via centralized data management with SKIDATA Management.Services

Integration of third-party solutions

based on open SKIDATA systems such as city cards, individual parking space monitoring, license plate recognition
